

One production line. Every card.

From your existing data to a finished ID card. One simple workflow.

Credentials Studio brings enrolment, photography, card design, personalisation and printing together in one application, on the computer beside your printer.

■ HOW IT WORKS

Six tools and a spreadsheet, replaced by one workflow.

ENROL → CAPTURE → DESIGN → PERSONALISE → PRINT → MANAGE

01 Enrol

Add cardholders individually, import them from a CSV or Excel file, or connect your existing MySQL or MariaDB database.

02 Capture

Take photographs with a webcam or import existing files. Portraits automatically crop to the proportions your card design requires.

03 Design

Create the front and back of your card in a visual designer: add text, photographs, logos, barcodes, QR codes, shapes and dates.

04 Personalise

Link your design to cardholder fields once, and every credential you issue is automatically filled with the correct information.

05 Print

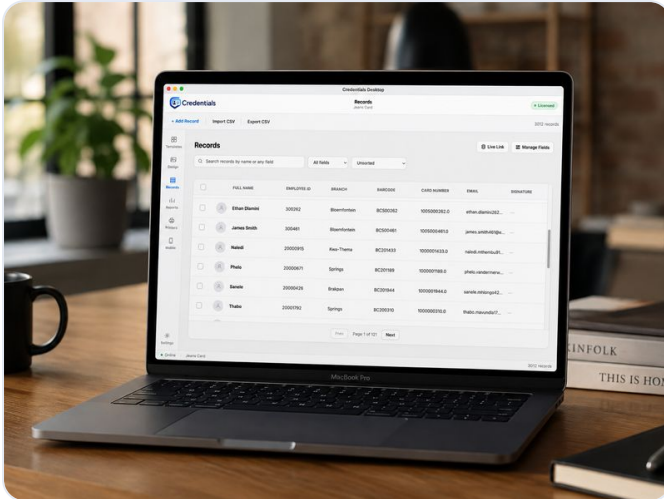

Preview the completed card and send it directly to your printer. Single or dual-sided CR80 cards, printed as one seamless job.

06 Manage

Keep a complete record of every card issued, and back up your designs and records securely to your own Google Drive.

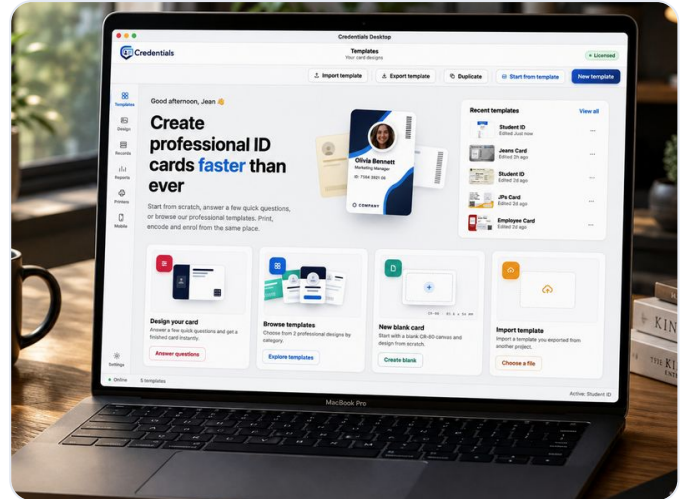

■ WHAT IT MAKES EASIER

Start from what you already have.

Already have your data?

Import CSV or Excel files, or connect directly to your existing MySQL or MariaDB database with Live Link. Rename card fields to the terminology your organisation uses, and keep photographs with their records instead of in a separate folder.

Already have a card design?

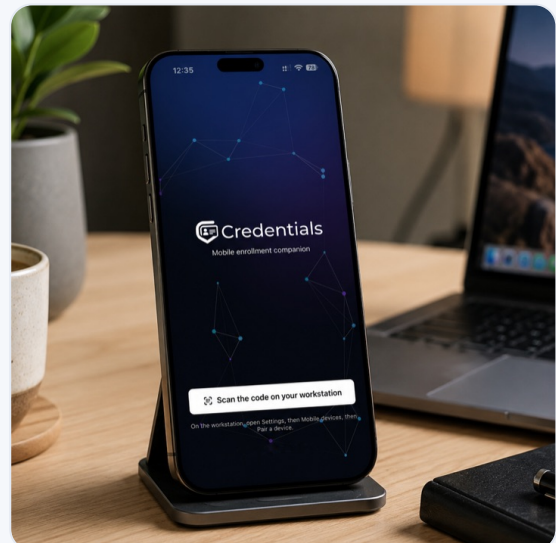

Build it once, front and back, connect your fields and let every new credential populate automatically. Keep a template per card type, site or department in one library, and reuse it on any workstation.

■ STOP BRINGING PEOPLE TO THE PRINTER

Take enrolment to them.

Need to enrol people away from the printer? Pair a phone with the workstation, capture the person's details, photograph and signature wherever they are, and sync the record over your local network into the same database the printer draws from.

PAIR → ENROL → SYNC → PRINT

■ SECURITY AND DATA

Your data stays yours.

Cardholder records, photographs and card designs stay on your own workstation, with optional encrypted backup to your own Google Drive. Nothing is uploaded to a central Credentials database.

- 01 Prints without internet.** Enrolment and printing continue during an outage.
- 02 Backup you control.** Encrypted before upload, restore points kept for a year, in a Drive folder that is yours.
- 03 A short compliance answer.** For a POPIA, GDPR or FERPA questionnaire: the data stays in your environment.

■ BUILT FOR REAL-WORLD CARD PRODUCTION

Works with the printer, the data and the computers you already have.

What the application does, and what it needs to run. Checked against the shipping build.

■ CARDS AND PRINTING

CARD SIZE	CR80 (85.6 × 54 mm)
PRINTING	Single and dual-sided, both faces sent as one duplex job
TEMPLATES	Multiple saved designs, per card type, site or department · export to file

■ PLATFORM AND SYSTEM

PLATFORMS	Windows 10 and 11 · macOS 11 Big Sur and later · signed and notarised by Apple · automatic updates on both
SYSTEM	64-bit Windows 10 or 11 · macOS 11 or later, Intel or Apple silicon · 4 GB RAM minimum, 8 GB recommended · 2 GB free disk
OFFLINE	Enrolment and printing continue without internet · a confirmed licence keeps working for three days offline

■ CAPTURE

PHOTOGRAPH	Webcam and file import · crop locked to the card's portrait aspect · stored against the record
SIGNATURE	Signed on the phone during enrolment · stored against the record · placed on the card as its own element
MOBILE	Credentials Mobile companion app, iOS and Android, paired over the local network
FINGERPRINT	COMING SOON · Biometric fingerprint captured at enrolment · stored against the record

■ DATA AND BACKUP

DATABASE	MySQL and MariaDB, through Live Link
IMPORT	CSV and Excel
EXPORT	CSV, and card designs to file
CLOUD BACKUP	Optional · your own Google Drive · encrypted before upload · on demand or on a daily schedule · restore points kept for a year

■ COMPATIBILITY

PRINTERS	HID FARGO · Zebra · Evolis · Magicard · Entrust Datacard · Seaory · IDP Smart · Matica, and any other printer installed on the workstation, driven through the driver it ships with
BARCODES & QR	QR · Code 128 · Code 39 · Code 93 · Codabar · EAN-13 · EAN-8 · UPC-A · UPC-E · Interleaved 2 of 5 · ITF-14 · MSI Plessey · PDF417 · Data Matrix · Aztec · GS1-128 with application identifiers

■ ONE APPLICATION. NO FEATURE TIERS.

Every plan gets the complete application.

The only difference is the number of licences. Nothing to upgrade into.

RECOMMENDED

Studio

3 licences

Bureau

6 licences

ANNUAL, PAID IN ADVANCE

One payment covers a year. It is not a recurring subscription, nothing renews on its own, and we never hold your card details.

A LICENCE FOLLOWS THE PERSON

Licences belong to people rather than to machines, so an operator can move between the computers your organisation uses.

NOTHING IS LOCKED IF IT LAPSES

The software keeps working and your records stay where they are. Cards printed after a lapse carry a trial mark until the licence is renewed.

■ INCLUDED WITH EVERY LICENCE

- The card designer, front and back, with unlimited saved templates
- Live Link to your own MySQL or MariaDB database
- Credentials Mobile for enrolment away from the printer
- Every barcode symbology and QR, with no add-on to buy
- Cardholder records, with CSV and Excel import and CSV export
- Photograph capture from a webcam, cropped to your design
- Encrypted backup to your own Google Drive
- Automatic updates on Windows and macOS alike

TRY IT FIRST

Free for as long as you like with every feature unlocked. Cards carry a TRIAL mark until a licence is assigned to the person printing.

BOUGHT IN A BOX

A licence card adds a year of the plan on the box to one account. Redeem the key once, from the portal.

■ TRY THE FULL APPLICATION FREE

See what it can do before you commit.

Download the application, install it beside your card printer, connect your existing data and start creating cards. Every feature is unlocked during the trial, giving you the opportunity to test the complete workflow with your own printers, data and card designs.

Printed cards carry a TRIAL mark until a licence is assigned. We'll help your operators create their first template and get familiar with the application.

NO AUTOMATIC RENEWAL. NO PAYMENT REQUIRED TO START.
